***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: the closest prior art references of record is the patent to Kukura et al. (6,453,320), cited in the previous action and the newly cited patent to Bowman-Amuah (6,539,396) and the PGPUBS reference to Kolsky et al. (20020022485). However, neither reference teach or suggest the features of generating a second object identifier including the data store including the target object and the first object identifier and inserting the generated second object identifier into the workflow packet, where nodes accessing objects in the workflow packet use the second object identifier to access the target object for use at the node, as indicated in claims 1, 13, and 25. The references also do not teach or suggest the features of providing a workflow packet referencing at least one object with a second object identifier, wherein the second object identifier indicates one of the data stores and the first object identifier of the referenced object in the data store and determining from the second object identifier the data store of the target object and the first object identifier of the target object and performing the I/O request on the target object at the determined first object identifier in the determined data store as indicated in claims 3, 15, and 27.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
